

Spacer

A super-simple Mahara plugin for spacing page elements

This is probably the simplest Mahara plugin possible, but I have found that it is used frequently by students at my institution, so it may be useful to others, or might be interesting for those starting Mahara development.

Requirements

Should work with most versions of Mahara - tested on 1.4, 1.5, 1.6

Installation

- Copy the 'spacer' folder to your Mahara installation, inside the folder htdocs/blocktype.
- Visit the Site Administration->Extensions->Plugin administration page and install the spacer plugin.

Usage

The Spacer content block appears under the General content type when creating pages. Drag it onto your page and set the height. Remove the block title if you want a truly empty page space.
